UF CONTINUING DENTAL EDUCATION

COMMITTED TO DENTAL EXCELLENCE
FROM THE DEAN

Welcome to the first all-digital edition of the University of Florida College of Dentistry’s Continuing Dental Education Course Guide. We have designed the new course guide to be completely accessible online using all electronic devices, including smart phones, with a goal of providing ease of use so your goal of lifelong professional learning can be arranged, literally, at your fingertips.

Within the course guide, you will find information and registration options for 55+ courses offering during more than 100+ sessions to make it as convenient as possible for you and your oral health care team to stay current with licensure requirements and with the leading edge of changes in our profession. We are always working to improve our course offerings to ensure the needs of our customers are met. Last year more than 2,000 people attended CE courses with UFCD.

This year we added several new programs including courses on digital scanning (Optical Impressioning in the Digital Era, page 30), a 3-part Digital Workflow Concentration (Synergy, page 16; Full-arch Fixed, page 17; and Full-arch CBCT, page 17), a Dental Lasers Certification (page 31), and Botulinum Toxin (Botulinum Toxin: The HOW & Why, page 13), to name just a few.

In the same way that we maintain a focus on the future for our CE programs, we maintain a future-focus for the overall direction of the college as well. Recently we completed a five-year strategic plan to guide our focus through 2024. The plan includes five key goals: education, patient care, research, infrastructure, and environment. We invite you to review the plan online (https://cod-strategic-plan.sites.medinfo.ufl.edu/) and share any feedback you may have with us.

Thank you so much for allowing us to play a role in your personal and professional development as your CE provider.

Warm regards,

A. Isabel Garcia
Dean

Executive Practice Management™ Program for Dentists Online:
Bridging the Knowledge Gap from Clinical Dentist to Business

COURSE DESCRIPTION
The Executive Practice Management™ Program for Dentists, offered by the University of Florida College of Dentistry, is designed to prepare dentists to become business owners and executive entrepreneurs within their dental practices. The curriculum designed for this 13-module program focuses on the critical components of business ownership not taught within traditional dental education (DMD/DDS) programs. This program will equip dentists with the leadership tools that will dramatically enhance your practice success.

Upon completion of this program, students will have a significant understanding of:
- Finance, financial management and financial planning
- Overall practice operations, compliance & efficiencies
- Human resources and staff management
- Practice sales, marketing and systems

COURSE OBJECTIVES
The program develops business skills to enable dentists to increase practice efficiencies and focus on serving patient’s needs. Practices that are soundly managed by knowledgeable dental entrepreneurs create solid financial growth and sustainability allowing dentists to focus on providing affordable, high-quality care for patients.

PREREQUISITES
Candidates must be practicing, actively-licensed dentists, newly graduated dentists, or graduating dentists in dental school, and be accepted to this program by the University of Florida College of Dentistry.

ADVANCED EDUCATION

FL AGD MasterTrack Course: Comprehensive Dentistry Program Class 31

“As past president of FL AGD, a graduate of CDP-22 and visiting faculty for CDP-23 – CDP-30, I cannot overstate the value and strength of this program. The personal enjoyment and professional growth derived from this program can best be illustrated by the number of individuals who have been repeat participants. I would like to encourage you to contact Dr. Jim Haddix, program director, or any of the other helpful people in the Office of Continuing Dental Education concerning questions about the program. We look forward to hearing from you!” TONY MENENDEZ, DDS, MAGD, AGD REGIONAL DIRECTOR

COURSE DESCRIPTION
UF College of Dentistry has been offering this unique program for over 39 years providing dentists an opportunity to:

• Earn 600 credits toward a Mastership in the Academy of General Dentistry MAGD
• Seek Diplomate status with the American Board of General Dentists upon successful completion
• Interact with instructors specializing in different fields; with evidence-based, research supported insights into the latest advancements in the profession
• Network with practitioners nationally and internationally
• Compile a body of reference material for practical, immediate use in your practice
• Expand knowledge for newly licensed dentists or introduce new skills for experienced dentists

COURSE OBJECTIVES
This 25-month postgraduate course in comprehensive dentistry provides the general practitioner an organized and structured educational program of dental sciences in a format that offers something for everyone. Classes meet one weekend per month on Friday, Saturday and Sunday (including breakfast/lunch on Fri/Sat and breakfast on Sun). Classes consist of lectures, discussion, in-office projects, literature review, and intensive hands-on participation utilizing the College of Dentistry’s state-of-the-art Simulation Lab.

The course curriculum parallels the requirements for Mastership in the Academy of General Dentistry. A certificate of completion is awarded each candidate meeting all requirements.

COURSE DIRECTOR
James Haddix, DMD, Associate Professor, Endodontics, Director of the Comprehensive Dentistry Program at UF and Assistant Dean of Continuing Dental Education.

FACULTY
Courses are presented by a variety of instructors including UF faculty, other nationally-recognized experts and private practitioners who are known for their standards of excellence.

Advanced Education CE: US and International Dentists and Dental Scholars

■ Internship | 1 Year
An educational experience that lasts one year and includes limited patient care. Internships are open to any dentist (U.S./International) with a dental degree; topics can be either general dentistry or dental specialties.

■ Fellowship | 1 Year
An educational experience that lasts one year and includes limited patient care. Fellowships are open to any dentist with a dental degree (U.S./International) and a specialty degree. The topic is a special-interest area in your specialty.

■ Preceptorship | 1 Month - 12 Months
An educational experience that lasts between one month and a year. No direct patient care is included in this experience. Preceptorships are intended for dentists with dental degrees and others who have earned a terminal degree (U.S./International). Topics can be either general dentistry, dental specialties or research topics.

■ Mini-Residency | 1-4 Weeks
A custom-study program that lasts less than one month. No direct patient care is included in this experience. Mini-residencies are intended for dentists with a dental degree (U.S./International), topics include dental specialties.

FACULTY
Courses will be presented by UF Faculty, who are known for their standards of excellence.

*NOTE to internationally-educated Dentists: These programs WILL NOT prepare dentists to become licensed to practice dentistry in Florida. If you are interested in practicing dentistry in Florida, you will need a dental degree from an ADA-accredited dental school in order to be eligible to take the Florida Dental License examination.

p7 – FUNDAMENTALS OF DENTAL ASSISTING

What can a career in Dental Assisting offer you?

This course provides an introduction to basic dental assisting theory and skills for pre-dental students planning to participate in the UFCD Dental Clinic Volunteer Program; and for individuals seeking an entry-level dental assisting position in a dental office. This is a hybrid course that includes self-study via required text, workbook, DVD and completion of the prerequisite online courses below, PLUS one weekend of classroom, lab, and clinic instruction and practice. The course includes certification in OSHA, Bloodborne Pathogens, Infectious Waste Management, and HIPAA. Student participants who complete this course receive a certificate of participation for all basic dental assisting functions and are eligible to enroll in the Expanded Functions Dental Assistant or Radiology certification courses.

If you have experience

CERTIFICATION COURSES FOR DENTAL AUXILIARY

Florida does not license dental assistants and there is no examination requirement. However, prior to the performance of expanded duties as defined by rule of the Board, the dental assistant must possess formal training. This certification training falls into two categories:

p8 – RADIOLOGY FOR DENTAL AUXILIARY: CERTIFICATION COURSE

Radiography certification is obtained through the Department of Health by submitting documentation of successful completion of a Board approved certification course; after completing three months of on-the-job training through assisting in the positioning and exposing of dental radiographic film under the direct supervision of a Florida licensed dentist. Department of Health application and fee is required, in addition.

p8 – EXPANDED FUNCTIONS FOR DENTAL AUXILIARY: CERTIFICATION COURSE

Formal training which is required for certification in order to legally perform certain remediable tasks. Rules 64BS-16.005 and 16.006, Florida Administrative Code, defines Remediable tasks (expanded functions) delegable to dental hygienists and dental assistants and the level of supervision required.

DENTAL AUXILIARY

CERTIFICATION CONTINUUM

Expanded Functions for Dental Auxiliary: 36-Hour Certification Course

36-hour Certification Course including Fabrication of Provisional Crowns. This course is approved for certification and training in Expanded Functions for dental auxiliaries in Florida and Georgia per Florida Statutes, Section 466.024(6) and Board of Dentistry Rule 64BS-16.005.

PREREQUISITE

Minimum of three months of experience as a chair-side assistant or hygienist OR completion of the Fundamentals of Dental Assisting Course (p. 8). A form will be provided upon registration to certify experience. Attendance of both Phase 2 & 3 is required for certification (Saturday-Sunday).

COURSE DESCRIPTION

This three phase participation course is designed to teach the auxiliary to perform those expanded functions listed below. This course will include those duties which may be performed under the supervision of a dentist and for which formal training is required.

Phase I: Online Instruction. Students must complete all of the online modular sessions and quizzes prior to attending the first clinical session.

Phase II: Part I Clinical Instruction. Students will participate in a review of the online modules, complete the written examination and begin clinical participation.

Phase III: Part II Clinical Instruction. Students will continue with clinical participation and complete a final clinical examination.

Certificates will be awarded upon demonstration of competency and satisfactory completion of written and clinical examinations.

COURSE OBJECTIVES

To provide training for certification in the following expanded functions:

- **Laws & Rules**
- **Infection Control**
- **Taking impressions for study casts**
- **Topical application of fluoride (incl. foam & varnish)**
- **Placing & removing rubber dams**
- **Placing and removing periodontal dressings**
- **Polishing clinical crowns for removal of stains**
- **Polishing amalgam restorations**
- **Placing bases and liners**
- **Suture removal**
- **Application of pit & fissure sealants**
- **Preliminary charting**
- **Cementing provisional crowns**
- **Cementing provisional crowns and bridges with temporary cement**

***All necessary supplies and instruments will be provided. Please bring your own safety glasses if you need special glasses.***

NOTE: Required prerequisites listed at www.ce.dental.ufl.edu/courses

DENTAL AUXILIARY

CERTIFICATION CONTINUUM

Radiology for Dental Auxiliary: Certification Course

This course is approved for Certification for Dental Radiographers per Florida Administrative Code, Chapter 64BS-9.011.

PREREQUISITE / LIMIT

At least three months of continuous on-the-job training through assisting in the positioning and exposing of dental radiographic film under the direct supervision of a licensed dentist OR have completed the Fundamentals of Dental Assisting course, and be at least 18 years of age, (Chapter 64BS-9.011). Signed acknowledgement of meeting these prerequisites is required. Participants may be dismissed from course if found lacking appropriate dental experience.

NOTE: Required prerequisites listed on course webpage at www.ce.dental.ufl.edu/courses

REGISTER EARLY

Limit is 20 participants, and course fills quickly.

COURSE DESCRIPTION

One of the few courses taught by full-time dental radiologists, this course is specifically designed to make a complex subject much easier to comprehend. Safety factors for protecting the operator and patient will be stressed.

Once you register, the link to the online lectures will be delivered to your email. These lectures are video-recorded and web-streamed for self-paced, stop-and-go, pause-and-rewind, or fast-forward viewing.

To complete the course, you must register for a one-day Saturday hands-on clinical workshop (included in course fee) at the University of Florida College of Dentistry. You’ll be given the registration links for your choice of workshop date in the web-based course. The mandatory workshop provides individualized hands-on clinical experience with mannequins to test proficiency in taking x-rays and knowledge of Radiation Safety.

COURSE OBJECTIVES

This course is a review for dental auxiliaries to reacquaint them with the necessary background material and fundamental principles needed for certification in radiology safety as currently required by Florida law.

Local Anesthesia for Today’s Dental Hygienist: Certification Course

COURSE DESCRIPTION
Today’s dental hygienist must be knowledgeable in all aspects of the hygiene profession including providing local anesthesia administration to provide comfort to the dental patient. Presented by the *ADA CERP recognized University of Florida Office of Continuing Dental Education and utilizing University of Florida faculty, this course provides the participant with the mechanics to create a positive patient environment with competent pain and anxiety management.

All aspects of local anesthesia are explored from pharmacology to anatomy and managing all dental patients requiring local anesthesia. Special emphasis is placed on administering anesthesia to a periodontal patient. Practice management aspects are provided with “pearls” to utilize quality local anesthesia administration by the dental hygienist as a practice builder involving today’s demanding patient.

As with any hands-on training course, the participant should realize that competency, and ultimately proficiency, in the administration of local anesthesia requires repeated administration and periodic self-re-education.

COURSE GOALS
The goals of this class are to assist the dental hygienist to become knowledgeable in:
- the use and administration of local anesthetics in all aspects of dentistry including periodontal patients
- the pharmacology, neurophysiology, neurochemistry and anatomy related to the administration of local anesthetics in a practical common sense approach
- in the physical and psychological evaluation of the patient prior to receiving local anesthetic or dental treatment
- the side effects, complications and the management of those problems associated with local anesthetics to maintain safety as a priority

COURSE OBJECTIVES
At the conclusion of the course, the participant will be trained in:
- Scope of pain and anxiety control
- Neurophysiology
- Pharmacology of local anesthetics and vasoconstrictors

AIRWAY

Basic Airway Management Course for Dentists: Changes to Anesthesia Rules

COURSE DESCRIPTION
Any dentist performing sedation or providing care to a sedated patient should be able to provide airway management and ventilation for a patient encountering respiratory distress. The goal of the basic airway course is to educate the practitioner in basic airway assessment via history and physical assessment of the patient and to review relevant anatomy, physiology, and equipment. The practitioner will learn the motor skills necessary to initiate basic airway management with regards to relieving obstruction, insertion of airway adjuncts, mask ventilation, and intubation. Motor skills will be developed under supervision utilizing simulation. Participants will complete a post-course evaluation of their airway skills.

COURSE OBJECTIVES
- Describe basic airway anatomy
- Review basic pulmonary physiology and understand the effects of sedation on respiration
- Review basic airway exam
- Identify patients with an abnormal pre-sedation airway evaluation and how this affects sedation risk
- Understand the role of monitoring in respiratory surveillance including observation, auscultation, pulse oximetry and end-tidal CO2 monitoring
- Describe clinical situations in which oxygen, bag-valve-mask ventilation or intubation may be needed, and review various airway-related emergency situations that may occur with sedated patients, including laryngospasm, foreign-body obstruction, emesis and aspiration, and bronchospasm
- Demonstrate understanding of indications for utilization of airway equipment and describe sizing and placement for the following: oxygen, stethoscope, bag-valve-mask, oropharyngeal and nasopharyngeal airways, laryngeal mask airway (LMA), endotracheal tube (ETT), bougie, stylet, laryngoscope; glidescope, Yankauer suction
- Review basic techniques of ventilation using simulated experiences
- Review basic techniques of intubation using simulated experiences with LMA, ETT
- Demonstrate confirming tube placement and ventilation using chest rise and ETCO2
- Teamwork in emergency response

BONUS ($159 Value) Free 4 CEU Online Course “Treatment of Medical Emergencies in the Dental Office”

ENDONTICS

Traumatic Injuries: A Clinical Approach for Today’s Practice

COURSE DESCRIPTION
Traumatic injuries often include situations where there is a diagnostic dilemma. In this presentation the difficulties in diagnosing and treating traumatized teeth will be discussed, as well new treatment modalities and the use of focal view CBCT.

COURSE OBJECTIVES
- Describe the clinical presentation of the different types of traumatized teeth
- List the indications, advantages and treatment modalities for the different types of traumatized teeth
- Describe how calcium hydroxide, splinting (with the appropriate time intervals), and decoronation may be used to treat traumatized teeth
- Discuss the protocol for diagnosing traumatized teeth and the prognostic evaluation of the case
- Recognizing differences in treatment for luxation injuries, avulsion and management of resorption.

ENDONTICS

Reliable Endodontic Outcomes:
The Latest Techniques for Enhancing Your Practice

COURSE DESCRIPTION
With this in-depth, hands-on learning experience, you will leave with the confidence needed to perform endodontic procedures from beginning to end with accuracy and efficiency. You will discover practical and scientifically proven techniques to incorporate into your root canal therapies that will aid in the predictable success of your procedures.

Reliable Endodontic Outcomes will take you through all aspects of the root canal treatment process, focusing on each element in detail. You will be guided systematically through access preparation and glide path management, innovative instrumentation techniques, irrigation protocols supported by activation technology and 3D fills in the most challenging canal systems. Develop a passion for endodontics from diagnosis to final obturation in this extended course.

COURSE OBJECTIVES
After this course, the participants will be able to:
• Ability to accurately diagnose endodontic cases and create a comprehensive treatment plan.
• Deeper understanding of every integrated step in endodontic therapy.
• Tips to avoid failures and overcome obstacles.

Continuing Dental Education at UFCD expresses appreciation to DENTSPLY-Sirona Endodontics for exhibitor support, which helped make this course possible.

ESTHETICS

Botulinum Toxin: The HOW & WHY to Incorporate it into Your Dental Practice

COURSE DESCRIPTION
This day and a half course (12 hours) will provide an introduction to Botulinum Toxin Type A, focusing on both the cosmetic and therapeutic uses to provide comprehensive patient care and “Total Facial Aesthetics” in your dental practice.

The presentation will include a review of pertinent facial anatomy and muscle physiology and Botulinum Toxin’s mechanism of action. Specific areas of treatment will be explained and demonstrated. The integration of Botulinum Toxin in a dental environment will be discussed, from the patient consultation to the evaluation and diagnosis and finally to the treatment with before and after case presentations.

Detailed information will be provided concerning the safety and risk concerns when using Botulinum Toxin, along with the management and treatment of complications, dilution protocols, sterile injection techniques and proper placement for desired outcomes.

During the course, you will gain valuable insight and pearls on the “how to” of incorporating Botulinum Toxin into your dental practice. The potential for practice growth and profitability will be explored, as well as implementation with staff training and incorporation into treatment plans.

In the hands-on workshop, you will have the opportunity to diagnose, map and treat a model patient with one-on-one mentored instruction. Upon completion of the full-day program, you will have the confidence and skills to begin implementing Botulinum Toxin treatments into your dental practice. *Participants to provide their own patient for injection lab Saturday.

COURSE OBJECTIVES
• Understand the benefits of adding Botulinum Toxin to your practice
• Review current trends in the cosmetic industry
• Define “Total Facial Aesthetics” concept
• Understand patient assessment and consultation for Botulinum Toxin treatments
• In-depth review of facial anatomy and muscle action to ensure treatments are safe and effective
• Learn proper sterile techniques for storage, preparation, dilution and injection of Botulinum Toxin
• Explain how to diagnose and treat the “gummy smile”
• Learn therapeutic treatment for bruxism to relieve TMJ syndrome
• Understand how to incorporate various treatments to optimize dental treatment plans
• And more…see website for full details: www.ce.dental.ufl.edu/courses

Continuing Dental Education at UFCD wishes to express its appreciation to Allergan for unrestricted educational grants, which helped to make this course possible.

**Update for 2019/2020: Medical Emergencies in the Dental Office**

*New Algorithms and Routes of Administration for Emergency Drugs, How to Save a Life (Including Your Own)*

**COURSE DESCRIPTION**

A crisis situation can — and likely will — occur at some time in your practice. Many potential medical emergencies can be prevented. Gain a comprehensive command of the essential knowledge and skills needed to handle a life threatening medical crisis.

There are more medically compromised patients coming to our offices than ever before. Acquire “up to the minute” actions for dealing with a medical emergency while challenging preconceived or outdated ideas. Daniel Pompa, DDS — Oral and Maxillofacial Surgeon, ADA Consultant and Seminar Series Speaker — discusses the prevention, preparation, recognition and management of medical emergencies. Delivered in an interactive, high energy, multimedia presentation frequently described by attendees as “highly informative,” “engaging,” and “exceptional.” A step-by-step medical approach using basic physical diagnostic methods is reviewed, giving the attendee a clear understanding of these medical findings. We will explore the “Conversational History” and how it will uncover medical issues not revealed by the standard health history form. Additionally, the participant will learn simple, non-invasive critical tests that can reduce overall risks. We clearly delineate indications for emergency drug use and proper dosages, as well as demonstrate how to assemble and maintain an ideal emergency drug kit. The newest techniques for drug administration will be shown for participants to hone their skills utilizing simulation models and real drugs.

All attendees will be given multiple products that can easily be used for a simple, in office, Medical Assessment, prior to treatment. These products are all non-invasive and the costs is included in the registration fee. These include: a Pulse Oximeter, Glucometer, Nebulizer, Albuterol packet, 3cc syringe, and an Atomizer. We will demonstrate how to use the products throughout the course.

**COURSE OBJECTIVES**

In this presentation you will:

- Participate along with your staff and other attendees in hands-on simulations of a variety of medical emergencies for which a dental office should be prepared including syncope, angina attack, MI, cardiac arrhythmia, stroke, hypertensive episode, airway obstruction, seizure, local anesthetic overdose, epinephrine reaction, hypoglycemia, asthma attack, hyperventilation, and allergic reaction/anaphylaxis

- Render emergency care in real time in a stress-free simulated surgical environment; respond to variations in patient response

- Assign roles and direct your team in rescuing your patient

- Define medical risk assessment and learn its relevance to the dental patient

- Understand the stress reaction and how it affects dental patients

- And More! See website for details — www.ce.dental.ufl.edu/courses
GENERAL DENTISTRY

15th Annual General Dentist Symposium & CDP Reunion

COURSE DESCRIPTION
This popular program will give you new and practical information on a broad range of topics of specific interest to general dentists. Brought to you by an outstanding panel of dental educators in a lively multi-topic, multi-speaker format, you will receive unbiased, evidence-based information in an engaging and concise one-day program.

- Michael R. Dorociak, DDS, MAGD
  BEST OF EVERYTHING - The Bottom Line on Top Products, Techniques, and Concepts That are Routinely Used in Dental Practice
- Panagiotis Zoidis, DDS
  Metal-free Modified Polyetheretherketone Restorations
- James E. Haddix, DMD
  Update on Invasive Cervical Resorption
- Cesar A Migliorati, DDS, MS, PhD
  Practical Aspects of Oral Medicine for the Dental Generalist

Boomer Dentistry AND Managing Implant Mucositis Versus Peri-Implantitis

Boomer Dentistry: Managing Dental Conditions of the “Boomer Generation”

COURSE DESCRIPTION
The over “sixty” population will increase significantly during the next decade and with that comes an increased frequency of oral conditions associated with the “Baby Boomer Generation.” Two primary areas of concern surrounding chronic inflammation are periodontitis, with over 40% having tooth loss disease, and Xerostomia, with the compromised lifestyle resulting from associated symptoms and root caries.

COURSE OBJECTIVES
• Standardizing the collection of periodontal data in an efficient manner and reviewing successful parameters to determine tooth survival in short and long term prognosis
• Developing “realistic” non-surgical therapies and the respective re-evaluation with emphasis on “new” anti-inflammatory systems including micro-ultrasonic and laser technology, and nutraceuticals such as probiotics and anti-oxidants

Managing Implant Mucositis Versus Peri-Implantitis
Perplexed by the elusive inflamed dental implant? Confused by the various treatment strategies?

COURSE DESCRIPTION
Inflammation around dental endosseous implants ranges from mucositis to bone loss implantitis. Recent studies reveal that implant success depends on quality prevention and maintenance while failure rates continue to be at an all time high. The dental team including the dental hygienist requires the adequate systems and tools to enhance the longevity of implant health.

COURSE OBJECTIVES
Build your confidence in implant management by:
• Enhancing your diagnostic skills for implantitis versus mucositis
• Considering local versus systemic antibiotics in detoxification/decontamination
• Creating innovative at home oral hygiene systems that enhance compliance
• Incorporating safe techniques for at-the-chair ultrasonic debridement

See website for complete details — www.ce.dental.ufl.edu/courses

Continuing Dental Education at UFCD wishes to express its appreciation to Florida Probe and PerioScience for unrestricted educational grants, which helped to make this course possible.
**Digital Workflow Concentration**

**Full-Arch Fixed Solutions: Planning, Placement and Restoration**

**COURSE DESCRIPTION**

The treatment of complete and single arch edentulism remains a significant priority for dental clinicians. With an aging population and advances in medicine, more patients with complex medical and dental needs, inclusive of edentulism, will seek care. This program will address the physical complexities of edentulism and requirements of a comprehensive pre-treatment analysis that will focus on providing the surgical and restorative options for our patients. The incorporation of digital technologies that assist in the acquisition of patient data and software for planning the dental implants will be covered in detail. Various guided technologies used in the placement of dental implants along with the use of pre-fabricated interim restorations will be highlighted based on indications, pros and cons of use. Restorative procedures including: treatment steps, prosthetic design, abutment and material selection will be covered. Recall and maintenance procedures for these patients will be introduced with regards to frequency and procedures.

The hands-on component will offer the participants an experience with CBCT guided implant placement in a simulated edentulous arch followed by abutment selection and denture conversion utilizing an immediate loading protocol.

This 2-day course offers a great opportunity for networking and collaboration between members of the entire treatment team. Sign-up today and join us for valuable information packed with practical pearls that you and your patients can benefit from.

**COURSE OBJECTIVES**

- To recognize factors of significance in the assessment of treatment outcomes, with particular reference to the full-arch situation.
- Become familiar with the varying philosophies in positioning & restoring implants to maximize available bone (native and grafted) based upon a restorative plan.
- Understand the available planning and treatment options utilizing digital planning and implant placement technologies.
- Become familiar with implant placement protocol in full arches.
- Recognize the available restorative materials & components that maximize durability, function and esthetics.

Continuing Education at UFCD wishes to express its appreciation to Straumann USA, LLC for an unrestricted grant, which helped, in part, to make this course possible.

---

**Digital Workflow Concentration**

**Full-Arch CBCT Guided Surgery and Immediate Restoration: Smile in a Box**

**COURSE DESCRIPTION**

The rehabilitation of the terminal dentition or completely edentulous arch with dental implants and a fixed solution has become a focal point in today’s implant practice. With patient awareness increasing from radio, TV and social media; prompting them to seek treatment, clinicians find themselves faced with the need to offer these services. In addition, evidence-based treatment protocols promote the social, functional and esthetic benefits of dental implant supported restorations, and with the increased integration of digital technology, this process has become streamlined for the treatment team. With the complexity that is often faced in these clinical situations (bone reduction, implant positioning, template design and fabrication, abutment selection, provisional fabrication and indexing), technology that is currently available, run by an extended member of the treatment team allows for these steps to be pre-planned and fabricated to ease the burden on the surgeon and restorative dentist at the time of surgery.

This two-day course will focus on the technology utilized to plan and order (“smile in a box”) CBCT guided templates and provisional restorations for treatment of the full-arch patient. Participants will be given presentations that demonstrate the stepwise patient evaluation and planning process followed by hands-on sessions executing the principles taught. Participants will also experience the use of the co-DiagnostiX software to import a DICOM file and merge it with a dual scan prosthesis. In addition, techniques to segment, plan implant placement and abutment selection will be covered. On a patient simulated model, the participant will use CBCT-generated stackable templates in the placement of four dental implants followed by abutment placement and indexing of a pre-fabricated interim restoration. All course participants will keep the hands-on model as a valuable patient education tool to be used in their practice.

**COURSE OBJECTIVES**

- To recognize factors of significance in the assessment of patients for full-arch CBCT guided placement and loading of implants.
- Become familiar with the varying template designs for the placement of implants in the full-arch situation.
- Understand techniques involved with immediate loading of implants with a full-arch fixed prosthesis.
- Become familiar with the options for definitive restorative materials as well as protocols in the maintenance of patients with full-arch restorations.

Continuing Education at UFCD wishes to express its appreciation to Straumann USA, LLC for an unrestricted grant, which helped, in part, to make this course possible.

Biologic Complications in Implant Dentistry

COURSE DESCRIPTION
Dental implants are increasingly being used as the primary choice to restore function and esthetics in our patients. With this, clinicians are seeing an increase in biologic, mechanical and technical complications associated with these rehabilitations. This presentation will focus on the biologic situations, by presenting a structured, evidence-based approach into the diagnosis, management and prevention of these complications.

Several questions will be answered during this lecture:
- How do we perform an examination of a dental implant and restoration?
- What is the difference between mucositis and peri-implantitis? Are there any risk factors for getting peri-implantitis? When is an implant considered failing?
- What are the treatment options for a failing implant?
- When do we “hang it up” and start over?

COURSE OBJECTIVES
- Be able to diagnose and describe the etiology of peri-implantitis
- Understand the risk factors, prevention and treatment of peri-implantitis
- Understand the options for treatment of peri-implantitis
- Become familiar with the procedures for implant removal

Comprehensive Interdisciplinary Training for Dental Implants: Multiple Live Patient Experiences

COURSE DESCRIPTION
Learn to predictably treat your patients using dental implants. Bring cases for review and you will benefit from one-on-one treatment planning. Instructors will guide you in your acquisition of the knowledge and confidence to treat cases from start to finish. You will learn to use CT guided surgical techniques, participate in hands-on model workshops and observe and place implants in live surgeries.

COURSE OBJECTIVES
Upon completion you will understand why, when, and how patients can benefit from dental implant treatment. Participants will be expected to demonstrate competency on all hands-on exercises and quizzes. Each participant will bring cases for treatment planning and review. Live surgeries will be observed and assisted at each session. Participation and assistance in live surgeries are required. Attendees should also bring a laptop for CT guided software training.

CO-SPONSOR
This continuing education activity has been planned and implemented in accordance with the standards of the ADA Continuing Education Recognition Program (ADA CERP) through joint efforts between the University of Florida and Implant Educators.

SESSIONS
- Introduction to implants, socket grafting and diagnosis with hands-on implant placement workshop. Step-by-step placement, uncovery and loading protocols. Keys to predictable success
- Use of CT Scans in implant therapy/treatment planning to minimize risks with hands-on CT software training
- Current concepts in fixed and removable implant prosthetics with hands-on prosthetic workshops including conventional and digital impression techniques. Treatment planning and treatment scheduling
- Soft tissue management/soft tissue flaps/suturing techniques. Soft tissue grafting to enhance esthetics with hands-on pig jaw workshop
- Ridge augmentation/osteotome spreading and splitting techniques. Sinus grafting techniques with hands-on surgical graft workshop
- And More! See website for complete details — www.ce.dental.ufl.edu
**Management of Ridge Deficiencies: Graft and Graft-less Options**

**COURSE DESCRIPTION**
This lecture will focus on modern treatment options for management of deficient alveolar ridges, aimed to maximize tissue quality at the implant interface with the oral cavity and creation of a stronger biologic seal, more resistant to peri-implantitis. Alternative implant options, graft materials, and instrumentation techniques will be discussed, including Osseodensification. Unlike traditional bone drilling technologies, Osseodensification does not excavate bone tissue. Rather, it preserves bone bulk so bone tissue is simultaneously compacted and auto-grafted in an outwardly expanding direction to form an osteotomy with compacted dense layer of bone tissue along its walls. Scientific literature has suggested that dense compacted bone tissue produces stronger purchase for dental implants, higher initial implant stability, higher insertion torque values, and may facilitate faster healing.

Furthermore, Osseodensification can also be used for alveolar ridge expansion and crestal sinus floor elevation. This CE course combines didactic lecture and hands-on workshop to cover a broad range of applications of Osseodensification in Implant Dentistry.

**COURSE OBJECTIVES**
At the end of this course clinicians should be able to:

- Understand the importance of implant design and selection for deficient ridges
- Learn the rationale and science behind Osseodensification
- Identify indications and contraindications for treatment
- Practice Osseodensification, ridge expansion, and crestal sinus floor elevation

**Soft-Tissue Grafting Options for the Single or Adjacent Missing Tooth Implant Site: Diagnosis, Indications and Technique**

**COURSE DESCRIPTION**
This course will utilize presentations, clinical case examples, videos and a hands-on portion to highlight the following topics:
- Diagnosis and classification of soft tissue defects
- Biology and anatomy of the oral soft tissue
- Wound healing
- Soft tissue augmentation techniques
- Contra indications and complications

The hands-on component (plastic model) will offer the participants the opportunity to practice incision design, flap management and suturing materials and technique.

This 1.5-day course offers a great opportunity for gaining exposure to varying soft tissue grafting options and is ideal for clinicians that already place dental implants or clinicians that want to understand more about the topic for better patient and team communication. Sign-up today and join us for valuable information packed with practical pearls that you and your patients will benefit from.

**COURSE OBJECTIVES**

- To recognize factors of significance in the soft tissue assessment
- Present different soft tissue defects and how predictable the regeneration/enhancement can be for each one.
- Become familiar with the varying philosophies for soft tissue graft regeneration and when they can be better indicated
- Understand the timing for tissue grafts
- Become familiar with free gingival graft and subepithelial connective tissue graft

LICENSE RENEWAL

License Renewal Seminar: UPDATED to include OSHA, Risk Management & Record Keeping

FLORIDA LICENSE RENEWAL DEADLINE IS FEB. 28, 2020

COURSE DESCRIPTION
While the Florida Board requires 30 hours of CEU for dentists, 24 hours of CEU for hygienists and 18 hours of CEU for dental labs, every biennium in order to renew your Florida license, there are certain specific courses that the state requires for relicensure. This one-day seminar is designed to satisfy those requirements.

Prevention of Medical Errors (2 CEU)* AGD# 159
This unit shall include a study of root cause analysis, error reduction and prevention, and patient safety.

Domestic Violence (2 CEU)**
Including information on the numbers of patients likely to be victims and/or predators in a professional’s practice, screening procedures for determining if a patient may have a history of being a victim or predator of domestic violence, and instruction on how to provide patients with information on resources in the local community to help victims of domestic violence. AGD# 156

OSHA/Bloodborne Pathogens (1.5 CEU)
Annual infection control, bloodborne pathogen, and TB education is required by JCAHO, ACHA, and OSHA. It is also important for you to review your role in infection control at this time.

Many of the topics included are mandated by either licensing or accrediting agencies. The other topics are important for healthcare infection control and will clarify your role in Infection Control. AGD# 148

Risk Management & Record Keeping (1.5 CEU)
In this age of expanding theories of tort liability, dentists may be responsible for more than their own acts. Dentists have responsibility for the actions of their office staff and those whom they directly employ. Most dentists don’t realize that they may also be held responsible for any acts of their partners, office staff or others who may perform procedures under their control or supervision.

This course will help you understand the issues involved and what procedures to implement to judiciously practice dentistry. AGD# 550

*Required for Florida License Renewal
**Required every third biennium

COURSE OBJECTIVES
To satisfy the state mandated course requirements for dentist and dental hygiene relicensure in a one-day seminar.

NITROUS OXIDE

Nitrous Oxide Psychosedation: Certification Course

This course is also approved for certification and training for dental auxiliaries in Florida, as per Florida Board of Dentistry Rule 64B5-14.004; Dental Assistants And Dental Hygienists may monitor nitrous-oxide inhalation analgesia under the direct supervision of a permitted dentist under the following conditions: 1) Satisfactory completion of no less than a two-day course of training as described in the American Dental Associations’ “Guidelines for Teaching and Comprehensive Control of Pain and Anxiety in Dentistry” or its equivalent, and 2) Maintenance of competency in cardiopulmonary resuscitation. (Also approved in Georgia.)

COURSE DESCRIPTION
Nitrous oxide-oxygen sedation properly administered to the conscious child or adult provides an important adjunctive aid to the management of the apprehensive patient. This course is designed to prepare the general dentist and auxiliary to use nitrous oxide psychosedation confidently in the office environment. The didactic and clinical instruction gives the participant a step-by-step procedural approach for the control of anxiety in the conscious patient. The structure of the program follows the guidelines for an approved office inhalation analgesia course as required by both Florida and Georgia Boards of Dentistry. To meet American Dental Association guidelines, twelve hours of this course will consist of a review of the instructional material, in a home-study format. A pre- and post-test will be given for certification. Required reading: “Handbook of Nitrous Oxide and Oxygen Sedation, 4e” by Morris Clark and Ann Burnick.

COURSE OBJECTIVES
At the completion of this course the participant should know:
- the history and characteristics of Nitrous Oxide Sedation
- the basic respiratory physiology, including the uptake and distribution of gases
- the states of anesthesia and phases of State I Anesthesia
- the pharmacology, and physiology of Nitrous Oxide
- the indications, contraindications, and complications of inhalation analgesia
- the characteristics of the Nitrous Oxide/Oxygen delivery system
- a clinical protocol for the use of Nitrous Oxide/Oxygen Sedation

*Due to concern for your health and welfare, pregnant women cannot participate in the clinical portion of this course, and therefore may not receive certification.

NOTE: Required prerequisites listed at www.ce.dental.ufl.edu/course
Continuing Education at UFCD wishes to express its appreciation to Porter Instruments for unrestricted educational grants, which helped, in part, to make this course possible.
ORAL MEDICINE

The Oral Systemic Connection: New Insights and Keeping You Informed

COURSE DESCRIPTION
Recent studies have reported an increased association between periodontal disease and a variety of medical conditions characterized by their chronicity and their increased rate of inflammation. This seminar will review the current literature on the topic and will examine the potential mechanisms underlying this association. Oral manifestation of various medical conditions and oral side effects of various medications will be presented.

COURSE OBJECTIVES
• Review the potential association between periodontal disease and cancer
• Describe the association between periodontal disease and cardiovascular disease and stroke
• Examine the bidirectional relationship between diabetes and periodontal disease
• Describe the potential link between periodontal disease and Alzheimer disease
• Describe the association between periodontal disease and preterm delivery — what should we tell our patient?
• Describe the link between periodontal disease and the risk for osteoporosis and respiratory diseases
• Describe the association between periodontal disease and obesity
• Describe the receptor for advanced glycation products and its potential involvement in the oral systemic association
• Describe the oral manifestation of systemic diseases
• Describe the oral manifestation of side effects of different medications

An Update on Oral Pathology

COURSE DESCRIPTION

Using an interactive audience participation platform and case presentation format, this seminar will present a potpourri of interesting case studies in oral and maxillofacial pathology covering a variety of conditions encountered in general and specialty dental practices. The presenter will utilize an Audience Response System which will enable participants to anonymously respond and interact with the presenter. In addition, the lecture will be customized by the audience responses and questions to better facilitate learning. Emphasis will be placed on lesions and conditions commonly seen in dental practice, especially those difficult to diagnose and/or manage newly diagnosed conditions, and pre-malignant or malignant lesions. The topics will include new understanding of oral cancer, burning mouth, clinical characteristics of oral cancer, evidence-based evaluation of new oral cancer diagnostic tools, osteochemonecrosis of jaws, reactions to medications, unusual soft and hard tissue oral lesions, commonly missed entities in oral pathology, etc. Management strategies of many common oral pathologies will be covered.

LEARNING OBJECTIVES

Upon completion of this course, participants should be able to:

• Recognize and understand numerous oral soft and hard tissue lesions and the implications of these lesions in dental practices
• Understand the underlying pathogenesis, signs and symptoms of various reactive oral lesions
• Develop a differential diagnosis for both soft and hard tissue lesions of the oral cavity
• Better recognize when and how to biopsy, improve diagnostic skills and management strategies of oral ulcerative and non-ulcerative oral lesions

17th Annual Oral Pathology Symposium:
LUST IN PATHOLOGY (Lumps, Ulcers, Striae, Treatment) & Diagnosis Update

COURSE DESCRIPTION

This seminar will present a potpourri of interesting case studies in oral and maxillofacial pathology covering a variety of conditions encountered in general and specialty dental practices. The presenters will utilize an Audience Response System which will enable participants to anonymously respond and interact with the presenters. In addition, the lecture will be customized by the audience responses and questions to better facilitate learning.

COURSE OBJECTIVES

Upon completion of this course, participants should be able to:

• Recognize and formulate a differential diagnosis, understand the etiology and management of various oral lesions and diseases
• Recognize and understand the association of human papilloma virus with numerous oral soft tissue lesions and the enormous implications of HPV driven cancers and lesions to our dental practice
• Understand the chemistry, pathogenesis, signs and symptoms of osteochemonecrosis related to bisphosphonate and other newer drugs
• Gain a better and in depth understanding of oral precancerous lesions and oral cancer
• Better recognize abnormalities, improve diagnostic skills and management techniques of oral soft and hard tissue lesions utilizing anonymous audience response devices

ORAL SURGERY

Basic Oral Surgery and Grafting for the General Practitioner

COURSE DESCRIPTION
This course will review the basic tenants of oral surgery appropriate for the general practitioner. Advanced review of surgical techniques and grafting of the maxillofacial region will be introduced and opportunities for hands on practice will be given. With a small group, more individualized attention regarding techniques and the nuances of grafting will be explained in detail. Perioperative management and postoperative expectations will finalize the course.

COURSE OBJECTIVES
Upon completion of this course, participants should be able to:
• The practitioner will review the surgical tenants and techniques of basic oral surgical procedures
• To learn about grafting options, techniques and adjuncts for the maxillofacial region
• Practice the technique of ridge preservation grafting
• Learn what to expect in the perioperative period of patient healing, complications and the management thereof.

ORTHODONTICS

Orthodontics for the General Dentist and Pediatric Dentist

COURSE DESCRIPTION
This comprehensive course provided by orthodontists on staff at the University of Florida is designed to enhance the practitioner’s fundamental knowledge of facial growth and development, to facilitate the skills needed to identify malocclusions, and to develop a working understanding of orthodontic diagnosis and treatment. Additionally, the practitioner will be taught to recognize and treat occlusal and skeletal problems indicating interceptive, limited, and comprehensive orthodontic treatment, as well as recognize more complex and severe occlusal and skeletal problems which should be referred to an orthodontic specialist. Clinical skill involving both fixed orthodontic treatment (braces) and Invisalign techniques will be reviewed. Workshops at which the participants will gain hands-on experience bonding brackets, changing archwires, and placing finishing bends will also be provided.

Additionally, throughout the lecture series, business management of orthodontic treatment within a pedodontic or general dentist office will be discussed.

COURSE OBJECTIVES
This comprehensive course will help a practitioner who is not an orthodontic specialist to:
• Gain clinical and didactic knowledge of orthodontics
• Properly diagnose orthodontic dental malocclusions and skeletal discrepancies
• Recognize potential complications and the need to refer to a orthodontic specialist when appropriate
• Develop a competent treatment plan
• Implement biomechanical methods to treat orthodontic cases

PEDIATRIC DENTISTRY

Pediatric Dentistry Practicum

COURSE DESCRIPTION
Management of Pain and Anxiety in the Pediatric Dental Patient
- Modern concepts in behavior guidance
- Best practices in local anesthesia and analgesia
- Administration of nitrous oxide
- Application of minimal sedation techniques

Selecting Dental Biomaterials and Techniques Employed in Preventive, Restorative and Pulp Therapy in Pediatric Dentistry – Lecture
- Early childhood caries and risk assessment of fluoride therapy
- Evidence-based restorative materials — selection and indications
- Sealants, bonding agents, glass ionomers and resin-modified glass ionomers
- Composites — anterior and posterior restorations
- Stainless steel crowns
- Trauma
- Modern concepts in pulp therapy

Restorative Techniques — Lab
- Rubber dam placement
- Class II — traditional and slot
- Strip crown form
- Pulpotomy
- Stainless steel crowns
- Composite veneered anterior stainless steel crown
- Case presentations

COURSE OBJECTIVES
The purpose of this course is to provide the general dental practitioner with contemporary knowledge and applied skills in pediatric dentistry that include:
- Behavior management techniques
- Updated knowledge and basic skills requisite to perform modern restorative procedures for the pediatric patient
- Problem-solving and treatment planning

PEDIATRIC DENTISTRY

Pediatric Dentistry Mini-Residency

COURSE DESCRIPTION
A mini-residency provides a flexible continuing education vehicle for dental practitioners interested in obtaining advanced knowledge and skills prerequisite to delivering proficient dental care to young children. The general goal is to expand the number and improve the quality of pediatric dental services rendered in a private practice or public health clinic setting. Training in a mini-residency enhances one’s qualifications when applying: 1) for hospital staff and operating room privileges, 2) for advanced specialty education programs in pediatric dentistry, and/or 3) for a pediatric conscious sedation permit. The mini-residency is custom-designed to provide observational clinical learning experiences and experiences with one-on-one instruction and supervision of patients with complex medical needs and challenging cases rendered in various environments using a variety of modalities.

No direct patient care is included in this experience. Clinical experience will include observations in our Residents’ sedation and regular clinic, Residents Friday seminars, Shands Operating Room (in-patient OR experience), our outpatient Children’s’ surgical center, Infant Oral Health Clinic, Craniofacial clinic and Special Needs clinic. These rotations can be modified to fit the needs of the Mini-resident.

COURSE OBJECTIVES
- Identify children that require general anesthesia for dental treatment.
- Discuss perioperative management of patients with complex medical conditions that require in-patient general anesthesia.
- Develop a comprehensive treatment plan for child patients with complex medical conditions.
- Recognize the different classifications of orofacial clefts
- Discuss the multidisciplinary approach to cleft care
- Recognize the different timing and stages of care of a child born with a cleft lip and palate
- Recognize the dental and non-dental problems that may present in a patient with a craniofacial anomaly
- Recognize systemic conditions that may be associated with orofacial clefts
- Review the role of dentist in the management of children with orofacial clefts
- Participate in the infant oral health clinic where residents provide education and intervention services, dental screenings, fluoride varnish applications to infants and their families to prevent early childhood caries.
**PHARMACOLOGY**

**Drugs in Dentistry Update: Including Conventional Drugs, Herbals and Natural Supplements**

**COURSE DESCRIPTION**
This course will present the most current information on conventional drugs, herbals, antioxidants and natural supplements having an impact on dental practice. Discussion will include new medical drugs, OTC ibuprofen-acetaminophen combination, recent incidences and ADA guidelines, and new updates for management of drug induced osteonecrosis of the jawbone; antibiotic update including various conditions for premedication, including joint prosthesis patients, cardiac issues with Z-PAK, five newly approved blood thinners to add to Plavix and Coumadin. Discussions will cover herbal supplements, free radicals, reactive oxygen species, antioxidants, chocolate, red wine, acai, pomegranate, Co-Q-10, marijuana and dental herbal. In addition, herbs that cause bleeding, latest on chondroitin and glucosamine/MSM, omega-3 fatty acids and vitamin D will be updated. We will cover the latest on CRP levels and the risk of heart attack; the different benefits of moderate alcohol consumption and what supplements to take for maximum health.

**COURSE OBJECTIVES**
Upon completion of this course, participants should be able to:
- Describe the latest guidelines on antibiotic use, analgesic use; new drugs and osteonecrosis of the jaw; various conditions premedicated with antibiotics
- List the important antioxidants and herbal supplements and compare their health benefits; list the NIH purported medical benefits and adverse reactions of smoking marijuana
- List the most recent findings on cardioprotective aspirin and the management of patients on
  - Pradaxa and other new blood thinners
- Describe the new findings on omega-3 fatty acids, vitamin D supplements, moderate alcohol consumption; describe the relationship between
- CRP, periodontal disease and risk of heart attack
- Better recognize abnormalities, improve diagnostic skills and management techniques of oral soft and hard tissue lesions utilizing anonymous audience response devices

**AUDIENCE**
- Dentists, dental hygienists, dental assistants, front office personnel

---

**PRACTICE MANAGEMENT**

**Associateships: Preparing for Success in Advance (a Hands-On Workshop)**

**COURSE DESCRIPTION**
While the demand for Associates has grown tremendously in the last few years, more than 70% of Associateships in dental practices still fail. Knowing when, where, and how to take on, or become, an Associate can be overwhelming. Creating a win-win strategy begins with the end in mind and creating goals for the Associateship. Failure to plan in advance can cost the senior dentist and/or new dentist a significant loss of time, resources, and ‘stomach lining’. This full day hands-on workshop will demystify the process, focus on the planning, and developing aspects for successful Associateships, from inception to potential buy-out. Sample Associate agreements will be reviewed and utilized to support the information presented in this workshop-style course, along with planning sheets and handouts. This course is designed for dentists wanting to offer an Associateship in their practice as well as dentists wanting to become an Associate.

**COURSE OBJECTIVES**
At the completion of the course participants will be able to:
- Develop the time frames, purpose & goals for Associateships
- Establish the planning process and financial aspects of Associateships
- Determine the correct IRS classification for the position: Employee vs. Independent Contractor
- Review the negotiation process and develop a communication strategy for the agreement
- Establish the associate compensation structure and restrictive covenants/clauses for the practice location
- Understand the buy-in and sell-out conditions for a dental practice transition
- Illuminate strategies for a win-win negotiation process to reduce the risk of a failed Associateship

Preparing to Sell to a DSO

COURSE DESCRIPTION
DSO’s (Dental Service Organizations) are paying top dollar for practices that meet specific criteria. With the markets for DSO-affiliated practices continuously expanding into the near future, demand is growing for dental practices that possess the desired characteristics for people, processes and profits. Traditional dental practice buyers can discount the value of a dental practice for sale down to 40% less than market value, while DSO’s can (and will) pay up to 100% of market value for certain dental practices. Therefore, a selling dentist can position themselves for maximum sale price of their practice by ensuring they possess the needed components of a DSO-desired practice. This course will provide the information and strategies for dentists to prepare their practice for sale to a DSO.

COURSE OBJECTIVES
At the completion of the course participants will be able to:
• Understand the components of a dental practice that are most valued by DSO’s
• Evaluate practice financial information to assess practice profitability
• Assemble the professional team for practice sale
• Develop a timeframe from preparation to affiliation
• Implement strategies for continued growth of the practice
• Review the steps for implementing and managing change
• Align the practice goals with the DSO’s goals for affiliation
• Understand the culture and personality of a DSO
• Illuminate the process of transitioning careers from dentist owner to affiliated dentist
• Highlight the strategies for success post-affiliation

Starting a Practice After Leaving a DSO

COURSE DESCRIPTION
Dentists’ first positions are often as an Associate in a DSO (Dental Support Organization) practice where they increase their clinical skills and absorb as much information as possible. Most Associates spend on average 1.7 years working for a DSO before moving on to the next career opportunity. Often the desire to start a new practice is strong, but the steps to be taken are not clear. This course will remove the mystery and outline the steps needed to transition from a DSO Associate to an entrepreneurial CEO of a dental start up.

COURSE OBJECTIVES
The goal of this course is to prepare dentists to start up their own dental practice after leaving a DSO.
At the completion of this course, dentists will be able to:
• Develop the Vision for the new practice start-up
• Understand the timeframe from idea inception to opening day
• Assemble the members of the professional team for the start-up
• Evaluate the financial requirements (both personally and professionally) for a start-up
• Estimate the cost of a start-up practice
• Formulate the marketing strategies for pre-and-post opening of the practice
• Synthesize the clinical and managerial knowledge and skills acquired into an entrepreneurial CEO mindset
• Review the process for formation of the legal entity
• Manage the Restrictive Covenant to assess for ideal location and patient demographics
• Identify the time-management skills best suited for a business owner and CEO

**Tax Minimization Strategies: What Every Dentist Needs to Know to Pay Less in 2019 and Beyond**

**COURSE DESCRIPTION**
New tax reform laws have a significant impact on individuals as well as dental practices’ tax planning. This course will compare and provide valuable insight into tax changes, while focusing on success strategies for tax planning going forward. After all, it’s not about how much one makes, but how much one keeps that matters. Illustrated scenarios will be used to demonstrate how the new tax plan will affect taxes in 2019 and future years.

**COURSE OBJECTIVES**
After attending this program, the participant will be able to:
- Understand the goals of the associateship
- Establish the planning process and timeframes for associateships
- Review agreements for terms, classifications, and compensation structures
- Illuminate strategies for successful negotiations
- Assess the practice’s financial position for valuation
- Identify the various options for partnership buy-in
- Determine the allocation of expenses, equity, and profit distributions
- Apply the process to both established practices and start-up practices

Cone Beam Computed Tomography — Interpretation Clerkship

COURSE DESCRIPTION
This course offers a 2 day clerkship opportunity to observe and learn the basic principles of CBCT imaging in dentistry and interpretation, including live lectures by Board Certified Oral & Maxillofacial Radiologist, Prosthodontist, and Endodontist. The clerkship will provide a general overview of the interpretation process through hands-on experience with several maxillofacial CBCT cases. Participants will be trained on the use of software and become competent in the reformation of images in multiple planes and cross-correlation of anatomy and variants.

Participants will be trained in interpretation using several cases with a variety of maxillofacial and related pathology, including TMD. This is a radiology interpretation experience, no specific training in implant placement will be provided. The clerkship includes lectures on the physics and biology of radiation, basics of interpretation of maxillofacial pathology, CT anatomy, variants, artifacts, protocols, indications, contraindications, doses, and position papers from different specialty groups. Participants may bring up to two anonymized cases each for discussion, following informed consent from the patient. This will be the participants’ responsibility.

Following self-interpretation, over-reads will be done by radiologists as a team-effort.

COURSE OBJECTIVES
At conclusion, the attendees will:
• Be familiar with basic radiographic anatomy and anatomic variants
• Understand rationale for using CBCT and specific protocols for specific diagnostic tasks
• Be able to provide basic interpretation of CBCT data
• Be able to use two different types of client viewing CBCT software
• Understand the advantages and disadvantages of CBCT
• Understand the capabilities of different imaging units and limitations
• Understand radiation safety as it pertains to the use of CBCT, doses, guidelines for use

Maximizing Important Information Seen in Panoramic Radiographs

COURSE DESCRIPTION
The panoramic imaging physics, indications, basics principles of interpretation, panoramic anatomy, technique errors and their correction will be discussed. Development of a differential diagnosis and the rationale for need of additional imaging or referral will also be included. Several cases will be discussed in an interactive session to introduce a critical thinking component with examples of pathoses observed in daily radiographic practice.

COURSE OBJECTIVES
This course will enable participants to understand the following:
• Principles of panoramic image formation
• Basic interpretation of panoramic radiographs
• Recognition of important anatomic landmarks
• How to distinguish normal from abnormal
• Normal anatomic variants
• Technique errors and artifacts
• Radiographic features of different lesions
• Development of a differential diagnosis
• Rationale for requirement of additional/advanced imaging

RESTORATIVE DENTISTRY

Oral and Maxillofacial Radiology Mini-Residency

COURSE DESCRIPTION
This mini-residency is designed as a one-week (5 working days) participation course involving the activities of the Oral and Maxillofacial Radiology Clinic at the University of Florida Health Science Center. Experiences include observation of interpretation of cone beam computed tomography (CBCT) and other conventional studies carried out in the clinic or referred from outside. Other available activities include attendance at the clinical radiology conference and the tumor board, if these are in session.

The instructor will attempt to tailor the mini-residency to meet the individual participant’s interests or needs.

COURSE OBJECTIVES
At completion, the participant will be updated on:
- Reading of cone beam computed tomography studies
- Use of dedicated cone beam imaging software
- Patient positioning and image acquisition techniques

TIME
The course will begin at 8:00 am on day 1 and end at 5:00 pm on day 5. Check-in and orientation will occur in the Department of Oral & Maxillofacial Diagnostic Sciences, Room D8-6 of the College of Dentistry. The course is offered on a year-round basis. Acceptance is limited to one participant during the mini-residency.

OBSERVATION
Participants will observe residents reading cases in the dedicated reading room and discuss cases with the attending.

RESTORATIVE DENTISTRY

Restorative Dentistry Update: From Conventional to Digital Dentistry

COURSE DESCRIPTION
This course will provide a comprehensive overview of innovations and essential techniques for success in restorative dentistry. A significant amount of material will be presented focusing on the “pearls” we all strive to glean from clinically based presentations. In addition, the course will include an update on dental materials, CAD/CAM and digital workflows in restorative dentistry.

COURSE OBJECTIVES
At the conclusion of this course, participants will be able to:
- Understand the medical model on management caries lesions
- Discuss recent advances in Adhesive Dentistry
- Understand the latest ceramic materials and their clinical applications
- Recognize the preparation design differences between E.max and Zirconia restorations
- Understand variations in Veneer preparations and their clinical application
- Select the appropriate cement for most clinical situations
- Understand the concept and history of CAD/CAM technology and digital dentistry
- Understand the criteria for material selection in digital dentistry
- Understand the difference between chair-side and laboratory fabrication of restoration
- Critically appraise the evidence in the literature for use of the systems discussed in the course
- Better oral health care for older adults in long-term care settings

Digital Technology is evolving patient care in exciting ways. One of the most paradigm shifting innovations applied today is the use of optical impression technology in the process of data acquisition allowing clinicians to enter into the digital world and use associated workflows easily. This technology not only allows for patients to be treated faster, more predictably, with greater ease and comfort, but the associated software innovations allow users to diagnose, treatment plan, fabricate restorations, and execute on therapies in unprecedented ways. This course will delve into the most state-of-the-art concepts in intra-oral scanning both from a didactic perspective as well as associated hands-on utilization.

COURSE OBJECTIVES
• Understand the concepts of optical impression technology
• Learn the various systems available and each one’s associated workflows
• Develop techniques for utilization of iOS in everyday clinical practice
• Gain knowledge on various applications of digital scans within a suite of software
• Hands-on exposure to iOS equipment systems for clinicians

Utilize Today’s Dental Lasers in Managing Periodontal/Soft Tissue Conditions in the Dental Practice (and optional ALD Certification)

Ready to enter the laser world? Or have an “unused” laser in the closet?

COURSE DESCRIPTION

Give your practice a boost by harnessing laser technology with a positive result that manages effectively day to day periodontal to soft tissue patient conditions. We provide the practitioner on how to choose the right laser and apply simple techniques that result in precision, controlled bleeding, accelerated healing, reduced post-operative issues, shorter procedure time, and a more relaxed experience for the patient. Procedures include non-surgical periodontics, frenectomy, gingivectomy, restorative roughing, biopsy, fibroma removal, implant uncovering and TMD bio-stimulation are presented considering coding and patient acceptance.

You experience direct hands-on activity with various lasers on a variety of models including the hog jaw. Instructors knowledgeable in all phases of laser dentistry are with you providing insight into each procedure in a step-by-step fashion to instill confidence when you return to the practice.

COURSE OBJECTIVES

- Investigate laser utilization including wavelengths and respective techniques
- Determine the appropriate laser equipment for the individual practice
- Understand indications for using laser in crown lengthening and pre-orthodontic procedures including esthetics
- ...And more. See website for full details.

***Take this course as a standalone experience or choose one of these two options for additional education.

Part 1 Foundations in Laser Dentistry (6 CEUs ONLINE with ALD ~ $450 fee to ALD)
Part 2 (includes 1 year membership to ALD) Hands-on Training: Utilize Today’s Lasers in Managing Periodontal/Soft Tissue Conditions in the Dental Office (Program #190832 ~ $399/$449 fee to UF)
Part 3 Standard Online Exam (included with the Part 1 fee)

OPTION TWO: Bundle & SAVE!
Bundle this Program with Program # 200221 “Advanced Ultrasonic Instrumentation in Periodontal Management” (page 10) February 8, 2020 for a complete weekend of Periodontal Management. Register for both programs at the same time and save $100. ($50 per program)

Continuing Dental Education at UFCD wishes to express its appreciation to Biolase, Florida Probe, Hu-Friedy and PerioScience for unrestricted educational grants, which helped to make this course possible.

User-Friendly Crown Lengthening Procedures to Enhance Excellent Restorative Dentistry

Challenged by subgingival margin placement? Want to manipulate gingival tissue with ease? Ready to add value-based procedures to your practice?

COURSE DESCRIPTION

Subgingival margin placement can be a challenge for the restorative dentist, including patient satisfaction with esthetic appearance. We overcome the limitations by providing the confidence to provide an array of straightforward surgical procedures with patient comfort and acceptance as a priority. In this hands-on workshop, experience manipulation of gingival and boney margins to obtain satisfying restorative results with defining end points and providing essential biologic width. We incorporate all techniques from traditional flaps to today’s micro invasive dental lasers. Billing and coding is reviewed to ensure effective reimbursement with case acceptance.

COURSE OBJECTIVES

- Collect data to determine case selection and choose appropriate surgical techniques
- Define anatomical limitations of surgical restorative access
- Determine case selection and choose surgical flap/laser techniques to achieve restorative access including flap manipulation, closed laser and suturing methodologies.
- Investigate laser utilization including wavelengths and respective techniques
- Review indications for mucogingival augmentation including attached gingivae and ridge anatomy
- Develop post-operative evaluation protocols assessing wound healing and complications

Continuing Dental Education at UFCD wishes to express its appreciation to Biolase, Florida Probe, Hu-Friedy and PerioScience for unrestricted educational grants, which helped to make this course possible.

• A separate check and registration form is required for each course. Please make additional copies if needed.
• Please make check or money order payable to the UNIVERSITY OF FLORIDA and mail with registration form to:
  UF Continuing Dental Education, P.O. Box 100417, Gainesville, FL 32610-0417. Indicate name of dentist if using office address.
• If you have a disability or special needs, please contact the Continuing Education Office at least 72 hours in advance.

CONTACT US

For additional information, contact our Customer Service Specialist at 1-888-550-4590 or ce@dental.ufl.edu.

CONFIRMATION

If you do not receive written confirmation of your registration a minimum of 14 days prior to the course starting date, please call 1-888-550-4590.

COURSE CHECK-IN

Unless stated otherwise in your letter of acknowledgment, check-in time will be 30 minutes prior to course start.

CANCELLATION AND REFUND POLICY – EFFECTIVE JANUARY 1, 2019

Standard Course Refund Policy

• Full refunds will be issued to registrants who cancel their registration no later than 14 days before the course starting date.
• Refunds, less $50, will be processed for registrants who cancel 7-13 days before the course starting date.
• A 50% refund will be issued for registrants who cancel 2-6 days before the course starting date.
• No refunds will be issued for registrants who cancel within 48 hours of the starting date.

Hands-On Courses with Pre-ordered Consumable Supplies Policy (i.e.: Pig jaws, cadaver heads, etc)

• Full refunds will be issued to registrants who cancel their registration no later than 14 days before the course starting date.
• Refunds, less $110, will be issued for registrants who cancel 7-13 days before the course starting date.
• A 50% refund will be issued for registrants who cancel 2-6 days before the course starting date.
• No refunds will be issued for registrants who cancel within 48 hours of the starting date.

Cancellations by telephone are acceptable; however, a written request must be received by our office before a refund may be processed.

Continuing Dental Education reserves the right to modify or cancel a course when circumstances warrant, including insufficient enrollment. Dates, course content, fees, or faculty will be changed only when unavoidable. If a course is already full when registrations are received, or if the course has been canceled, applicants will be notified and a full refund will be processed.

Continuing Dental Education will not be responsible for non-refundable airfare or other expenses in the event of a course cancellation.

The University of Florida encourages participation in its continuing education programs by qualified persons of both sexes from all cultural, racial, religious and ethnic groups.
